Drive Unstoppable

G L O S T E R

THE ADVANCED
 G L O S T E R
#DriveUnstoppable

THE ADVANCED **G L O S T E R**

The name 'GLOSTER' pays homage to MG's British genes and stands for being **Bold, Sturdy, Reliable and Versatile**. GLOSTER was a British jet-engine aircraft prototype & the name is a nod to great British engineering. With best-in-class features, a towering road presence, powerful capability, and luxurious interiors, The Advanced Gloster is designed to set new benchmarks.

**THE ADVANCED
GLOSTER**

In life, one always has choices.

Either live a patterned existence and watch life pass by

Or have an open mind and explore all that life has to offer.

With its cutting-edge features and elegant design,

The Advanced Gloster is designed to break the monotony

And open new roads.

It is built to surprise you at every turn with

New-age driving tech and advanced personalization.

Crafted to constantly remind you that,

Life always has more to offer, only if you are looking for it.

DESIGN INSPIRATION

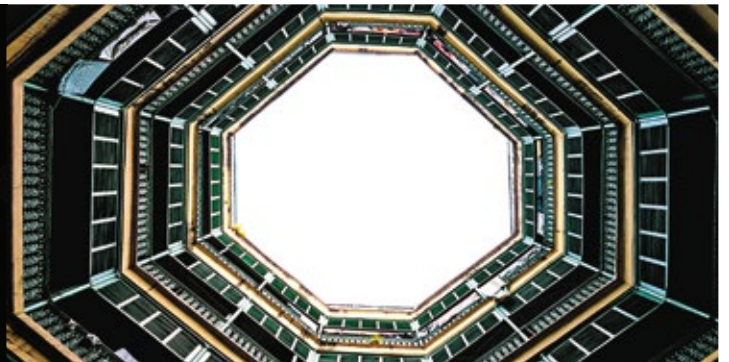

When perfection meets personalization, it brings new meaning to what we perceive as the epitome of luxury to be. Inspired by the multiple facets of the world around us, we translated it into a unique design language that magnifies the dynamics of power and luxury to compliment **YOU**.

The Advanced Gloster is born out of the beauty of 'Art of Surfing'.

The floating roof design makes up for its distinct language.

The octagon signature grille which in oriental philosophy signifies good health and fortune.

Diffused lightguide in tail lamp is inspired by unique racetrack pattern.

ADAS

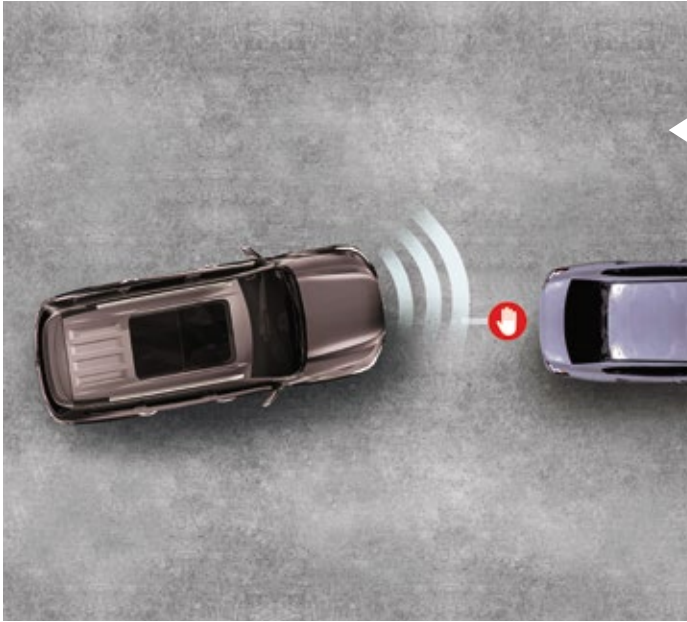

ASSISTED AND INTUITIVE DRIVING

ADAS is a group of safety and convenience functions intended to improve comfort for drivers and road safety, and preventing or reducing the severity of potential accidents. ADAS can do all this by alerting the driver, implementing possible safeguards in the vehicle & automating driving controls (based on the driving automation level of the vehicle). While Autonomous Level-5 denotes the global future dream of completely driverless cars, Level-1 acts as a driver assistant and the vehicle is dependent on the driver to monitor the driving environment and conditions.

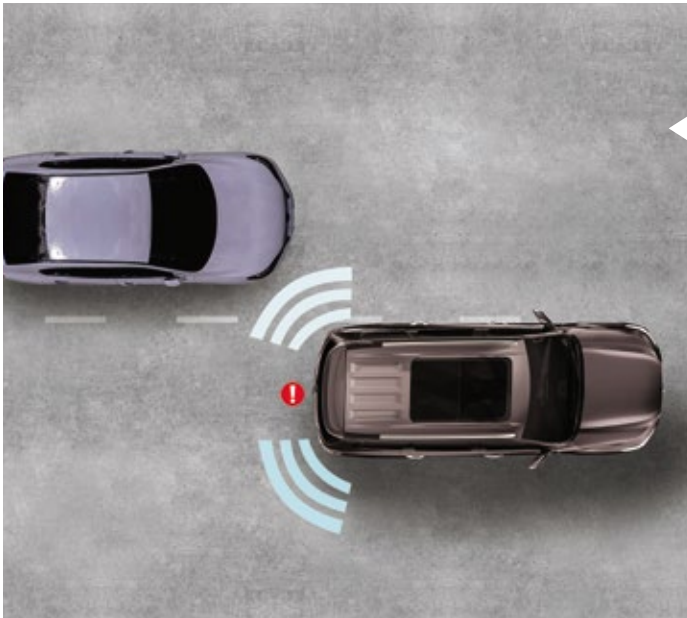

*Advanced Driver Assistance System (ADAS) is not a substitute for human eye and driver vigilance, it is a driver assist system that enhances driving experience and safety. The driver shall remain responsible for safe, vigilant and attentive driving.

ADAS FEATURES

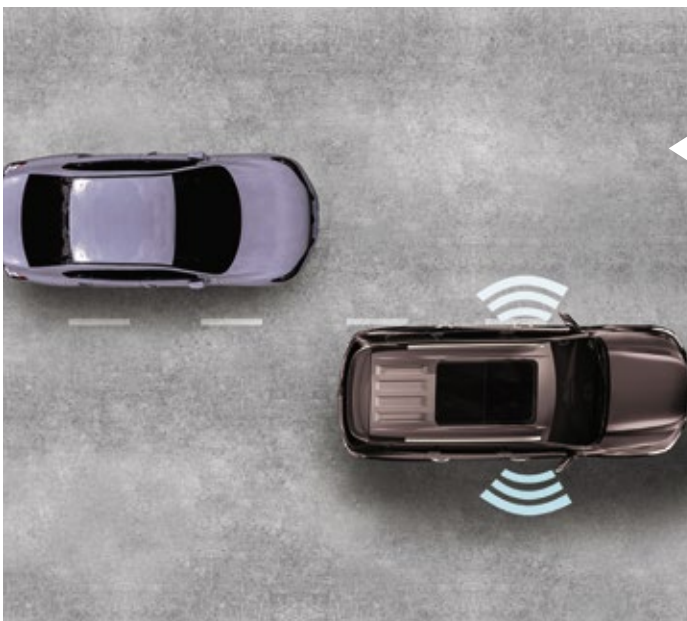

LANE CHANGE ASSIST (LCA)

Lane Change Assist (LCA) aids drivers in changing lanes safely by utilizing sensors to detect and warn about approaching cars in adjacent lanes. LCA can help alert you about vehicles approaching your blind spots, which can prevent lane change accidents on the road. When LCA senses that you are going to change lanes in a potentially dangerous way, it will provide an acoustic and/or visual warning to help you make a safe lane change.

REAR CROSS TRAFFIC ALERT (RCTA)

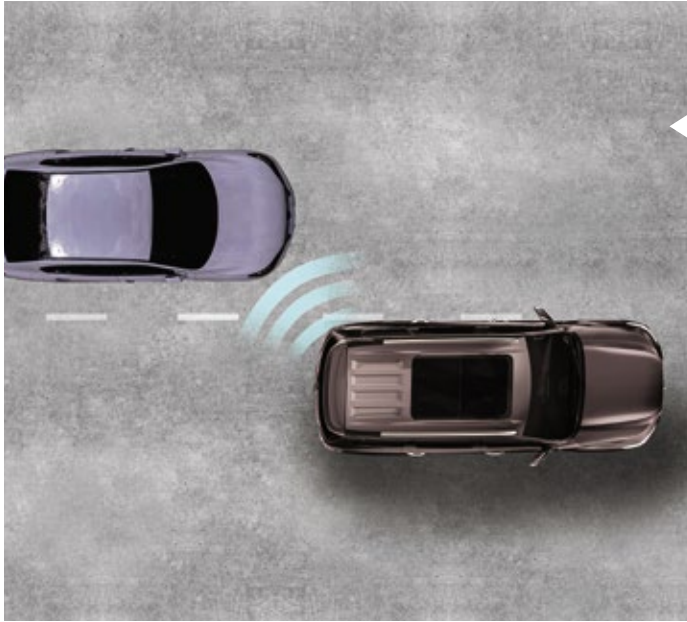

Whenever there is a danger of collision during reversing and leaving a parking area, then the warning light on the corresponding side flashes along with an alarm icon, which is displayed on the reversing image screen for 3 seconds to alert you of the incoming danger.

DOOR OPEN WARNING (DOW)

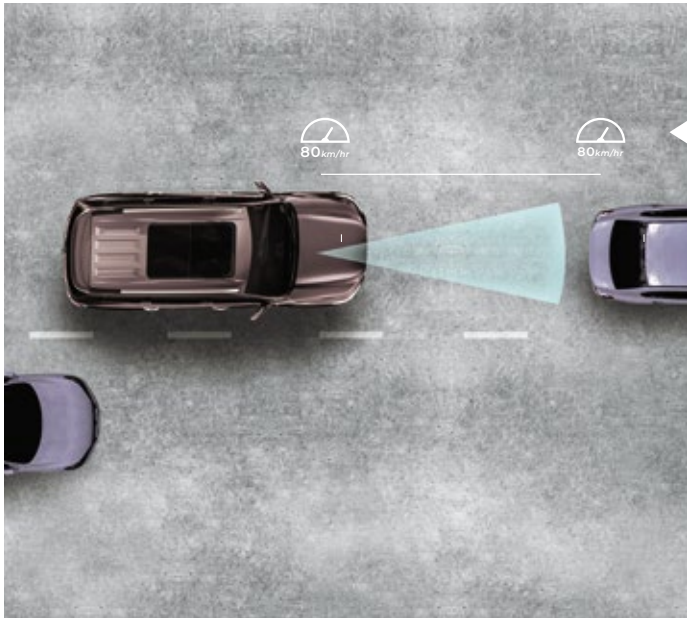

When you pull over and park, the rear radar on the side of the Gloster detects any moving vehicle on its adjacent sides in real time. When it senses that there is a risk of impact between the moving target on the rear side and the door of the Gloster, the Door Open Warning system alerts you of the risk of a door opening collision.

ADAS FEATURES

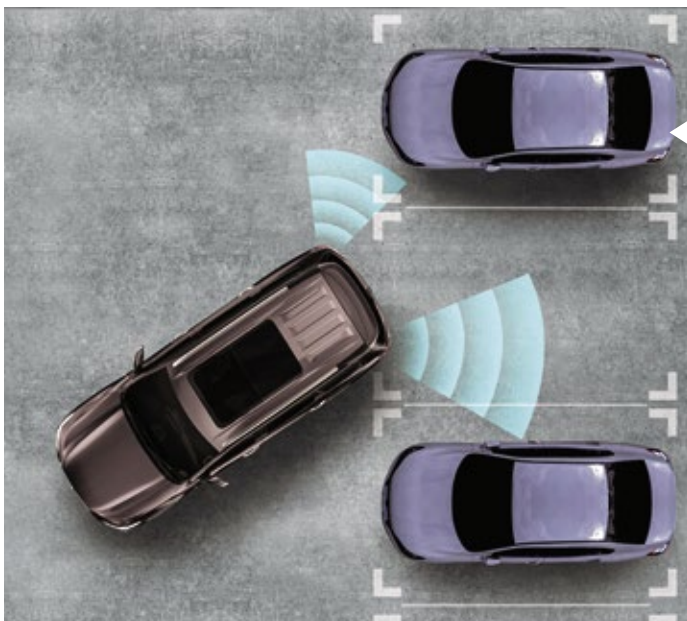

BLIND SPOT DETECTION (BSD)

Sometimes, even after adhering to all rules of the road and maintaining road decorum, mishaps happen on the account of things out of your control. Blind Spot Detection systems use sensors to provide drivers with important information that is otherwise difficult or impossible to obtain. This feature detects and alerts the driver of any sudden movements in his/her blind spot – be it over-taking vehicles or side-lane strafing by motorcyclists.

ADAPTIVE CRUISE CONTROL (ACC)

Adaptive Cruise Control, also known as ACC is an advanced version of cruise control, particularly helpful for long drives as it senses the road ahead and enables the vehicle to control its acceleration and braking to achieve desired speed but also maintain safe distance from cars ahead. It can also come in handy while waiting at the red light and rush hour commuting. It is a full range cruise control that simply put, can just automatically follow the car in front of you as it can speed up to 150kmph and can slow down even to zero to achieve pace set by the driver while keeping a safe distance from the car in front of you as per the safe interval set by the driver.

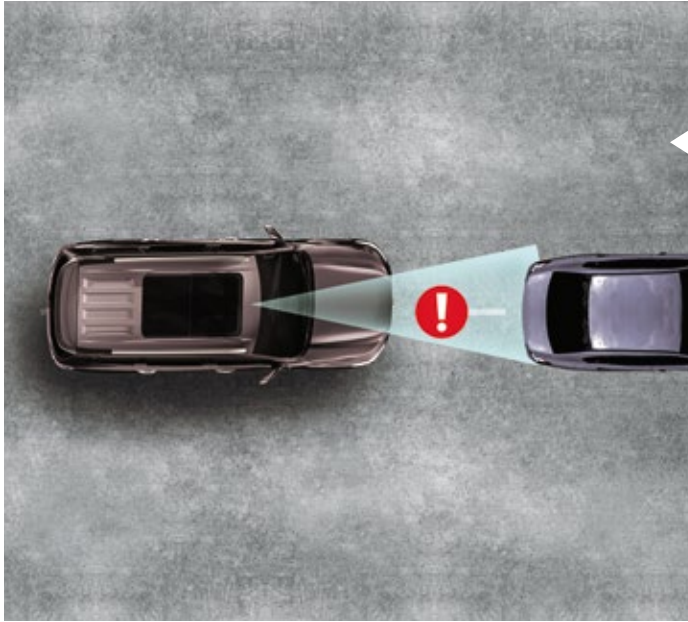

AUTOMATIC PARKING ASSIST (APA)

This system is a parking assist system for assisting in typical parallel and vertical parking. Once turned on, the ultrasonic sensor searches and judges the parking space. Once sufficient parking space is detected, the vehicle will assist you in parking by controlling the steering movement automatically and telling the driver when to apply reverse and drive gear and apply brake. This technology helps to solve common parking problems in densely populated urban areas. Automatic parking technology can park the car in smaller spaces. This makes it easier for car owners to find parking spaces, while taking up less space.

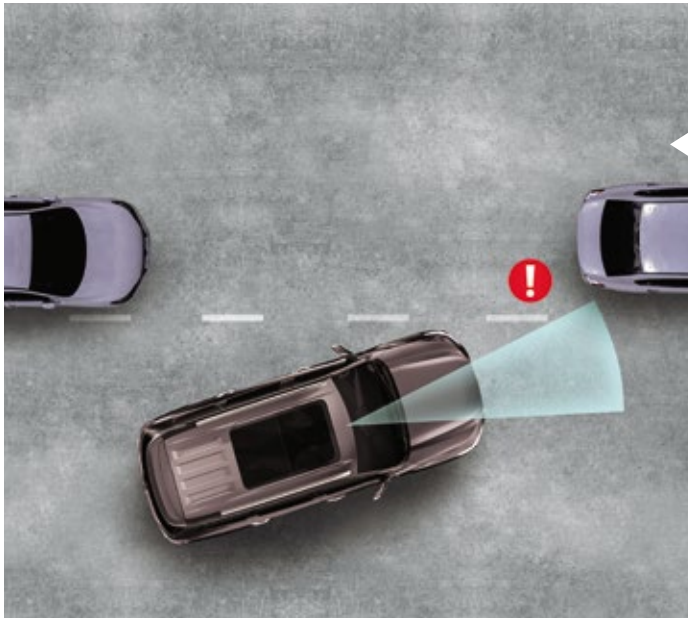

ADAS FEATURES

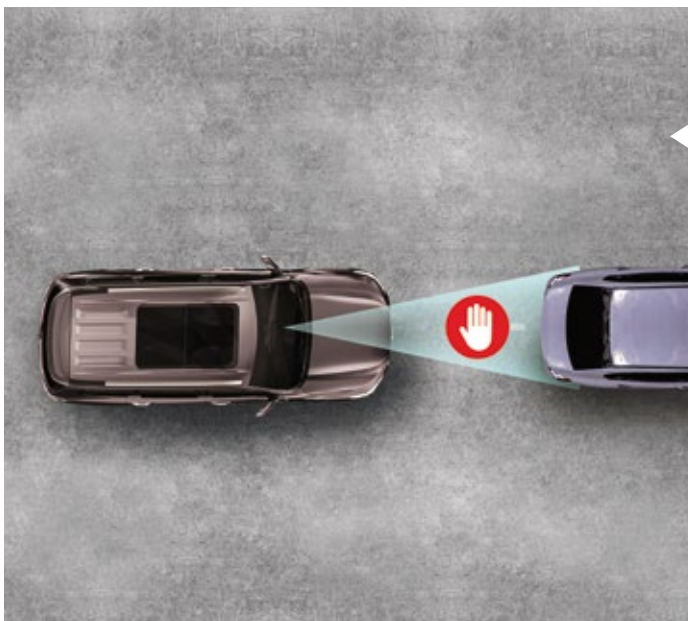

FORWARD COLLISION WARNING (FCW)#

For the odd time or two when your gaze may falter from the road, it can have grave repercussions. However, the Forward Collision Warning, alerts the driver with both visual and acoustic signals when a potential collision is detected with a four-wheeler, two-wheeler or a pedestrian. The system is designed to alert and bring back the driver's attention and reduce the probability of a collision.

LANE DEPARTURE WARNING (LDW)

Lane Departure Warning uses a camera to detect lane markings ahead and monitors the vehicle's position in its lane. When the function detects that the vehicle is unintentionally, about to move out of its designated lane, it warns the driver by means of visual and acoustic signals.

AUTOMATIC EMERGENCY BRAKING (AEB)*

In case, the driver takes no or insufficient action on the FCW alert and warning for potential collision with a four wheeler, the Automatic Emergency Braking will get activated and apply brakes on your behalf to further prevent or reduce the severity of the possible collision.

#FCW alerts the driver of a possible collision by detecting pedestrian, bicycle or vehicle in front through visual and acoustic sign.
*AEB activates braking intervention to help in preventing collision at slow speed or reduce speed of collision by decreasing the vehicle speed by 40 km/h at most (braking intervention for four-wheelers only).

INTELLIGENT

4X4

CAPABLE BEYOND CONVENTION

With great power and capability that The Advanced Gloster comes with, it stands true to the values it reflects and delivers on what its made for - the outdoors and the adventures. Built on the next-generation intelligent 4 wheel drive system, The Advanced Gloster takes on and tackles all kinds of terrains that come its way.
